Directions: Sequence count by two up to the dividend making a tally mark in the box as you say each number. Then count the tally marks and write the answer. Say the problem and answer quietly.

Divide = Take apart or separate into groups.

Divisor = The number being used to divide.

Dividend = The number or quantity to be divided.

Quotient = The answer in a division problem.

Remainder = The number left that is less than the divisor.

Write the dividend and divisor.

$$1 \overline{)6} \quad \text{dividend} = \square$$

$$\text{divisor} = \square$$

Name \_\_\_\_\_

Directions: Solve both problems using short division. On the second problem, multiply the quotient by the divisor, and write the answer below the dividend. Then subtract to find the remainder.
